PROFILE

Backend Software Engineer (SDE-I) with production experience building scalable, distributed services and data pipelines. Proficient in Java (Spring Boot), Kafka-based event-driven architectures, and cloud deployments on AWS. Strong foundation in OOP, distributed systems, and end-to-end feature ownership. Final-year B.Tech CS+AI, Mahindra University (May 2027). Top 200 of 130,000 at Centific Residential Hackathon (top 0.15%).

TECHNICAL SKILLS

Languages: Java, Python, TypeScript/Node.js, SQL

Distributed Systems & Messaging: Apache Kafka, Apache Spark (structured streaming), asynchronous messaging, event-driven microservices, high-availability design

Frameworks: Spring Boot, Spring MVC, Hibernate/JPA, FastAPI, Express.js

Cloud & Infrastructure: AWS (EC2, S3, SQS, Lambda, RDS), Docker, GitHub Actions CI/CD, Kubernetes (familiar)

Databases: PostgreSQL, MySQL, Redis, MongoDB

Practices: OOP/Design Patterns, RESTful APIs, Service-Oriented Architecture, Load Balancing, Code Reviews, Observability & Logging, Agile/Scrum

EXPERIENCE

Sobhana Polyclinics & Diagnostics – *Freelance Backend Engineer*

Jan 2025 – Present

- Built and operate a production Java/Spring Boot backend serving the clinic's diagnostic workflow (radiology, laboratory, payout modules); translated business requirements into scalable REST APIs with JWT authentication and role-based access control.
- Implemented event-driven module communication via a Kafka-style publish-subscribe pattern; decoupled report-generation producers from payout-computation consumers, improving system availability and reducing inter-module coupling.
- Engineered a concurrent payout processing engine; designed PostgreSQL schemas with indexing and pagination to sustain sub-200 ms p99 latency. Containerised with Docker; CI/CD via GitHub Actions using OOP design patterns (Repository, Strategy, Factory).

Colruyt Group India – *Data Engineering Intern*

Dec 2025 – Jan 2026

- Built modular Python ETL pipelines for large retail datasets in PostgreSQL; SQL optimisation reduced report latency by ~40%. Handled severe class imbalance (~5% positives) in a customer-ranking system feeding downstream business services.
- Collaborated cross-functionally with data and marketing teams; presented findings to non-technical stakeholders in an Agile sprint cycle.

University of Hamburg – *Research Intern, Applied ML*

Jul 2025 – Oct 2025

- Built Python pipelines for large-scale IoT time-series sensor data; compared ML and deep learning approaches on ~20k-sample datasets across 27 device classes.

PROJECTS

Order-Processing Microservice Platform

Java, Spring Boot, Apache Kafka, AWS (EC2/RDS/SQS), Docker

- Engineered a distributed order-processing pipeline: orders ingested via Kafka topics, routed through Spring Boot microservices (inventory-check, fulfilment, notification), persisted to PostgreSQL on AWS RDS.
- Idempotent Kafka consumers with manual offset commits for exactly-once semantics; dead-letter queue handling for failed events; structured JSON logging with correlation IDs for end-to-end traceability.
- Deployed on AWS EC2 with Docker Compose; SQS as async fallback channel. Achieved ~3,000 orders/sec on a 2-broker cluster with horizontal consumer-group scale-out; load-tested with JMeter and documented performance trade-offs.

IoT Device Identification Service

Python, FastAPI, Scikit-learn, Docker, REST

- ML inference REST service classifying IoT devices across 27 classes; 88.84% accuracy (Histogram Gradient Boosting), sub-100 ms p95 latency on ~20k samples.
- Modular pipeline separating ingest, feature engineering, model, and serving layers; containerised with Docker for reproducible deployment.

EDUCATION

Mahindra University, Hyderabad

Aug 2023 – Expected May 2027

B.Tech in Computer Science & Artificial Intelligence

Coursework: Data Structures & Algorithms, OOP, DBMS, OS, Computer Networks, Distributed Systems, Software Engineering, Machine Learning

ACHIEVEMENTS

- **Centific Residential Hackathon – Top 200 of 130,000 (0.15%):** Nationally selected for invite-only 2-week in-person hackathon; delivered production-grade backend solutions under deadline pressure.
- **1st Prize, Blockchain Hackathon:** Led a 4-person team to ship a tokenized real-estate platform in 36 hours; owned the Java/Node.js backend and REST API layer.
